

# AutoScaler

## Eliminate block storage overprovisioning

The volume of data is skyrocketing, and it's moving to the cloud faster than ever. However, as adoption increases, many enterprises are facing serious challenges with effectively managing cloud storage, forced to navigate more than 1,000 combinations of manual decisions. The complexity of capacity management alone drives millions of dollars of wasted spend, with an industry average of only 30% disk utilization. It's clear: IT and cloud operations teams need a smarter, more automated approach to managing cloud storage.

Lucidity transforms cloud storage management from a reactive chore into a proactive, strategic advantage. Compatible with AWS, Azure, and Google Cloud, AutoScaler automates cloud block storage provisioning, empowering IT, Cloud, and DevOps teams at the world's largest enterprises to drastically reduce spend, prevent downtime, and streamline operations.

### Reduce wasted cloud spend up to 70%

Autonomously rightsize your block storage on an ongoing basis to cut out overprovisioning and reduce your cloud block storage spend by up to 70%

### Reclaim 100s of engineering hours

Automate expands and shrinks to reclaim hundreds of IT and DevOps hours for higher impact initiatives

### Optimize in minutes with zero code changes

AutoScaler does not sit between you and your data, bringing automated storage management in minutes without changing a single line of code

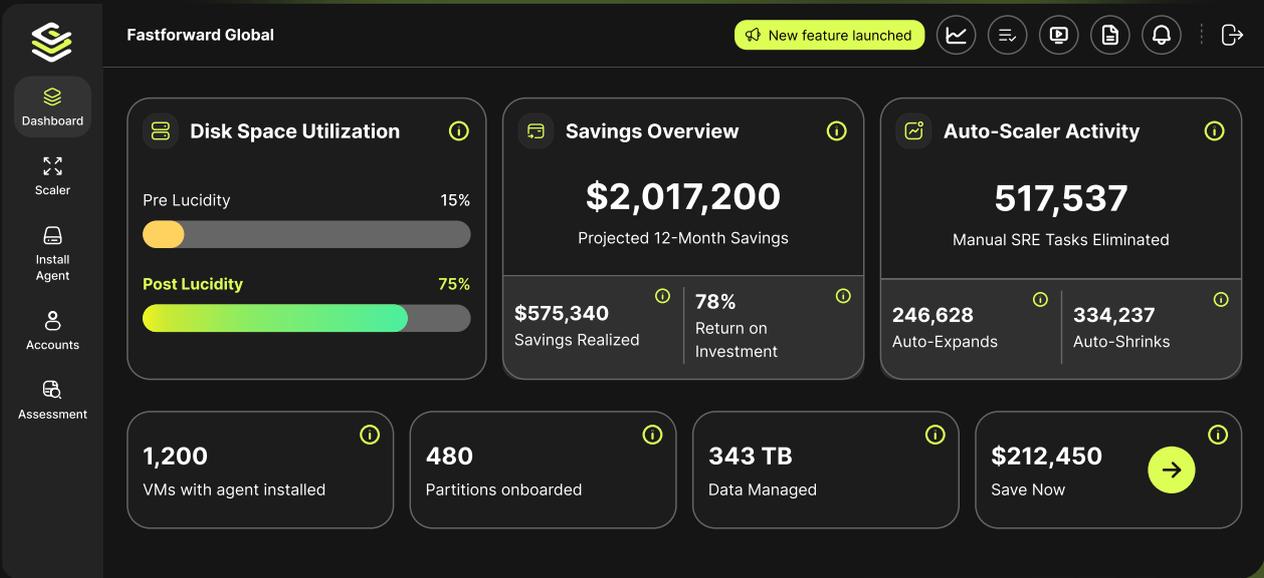

## Works across

*"We used to spend countless hours provisioning our cloud block storage. With Lucidity, we were able to not only free up that time by automating our storage management, but were able to save significant cost on our annual block storage spend."*

**Brian Lupson,**  
Director of Operations & Governance

### Get visibility into disk utilization and cloud storage spend

See your disk utilization and potential and realized savings across the environment, and drill into any VM or EKS cluster to explore real-time provisioning actions

### Eliminate overprovisioning on an ongoing basis

Automatically and continuously rightsize block storage and EKS volumes based on your real-time data needs to both mitigate downtime risks and cut out wasteful overprovisioning

### Automate expands and shrinks with zero downtime

AutoScaler automates cloud block storage volume expands and shrinks with no downtime or manual effort, freeing up engineering time and creating peace of mind

### Rapid time-to-value and significant cost savings

Operate at enterprise-scale with three step onboarding and start realizing tangible savings and performance improvements within 15 days of deployment
